Appendix: Andre Gorz Rides Again—or Politics as Environmentalism	287
Acknowledgements	315

toward an ecological society

Murray Bookchin

Second Printing

Murray Bookchin is a pioneer of the social ecology movement. His writings on ecology go back to 1952, some time before the publication of Rachel Carson's *Silent Spring* in 1963; his opposition to nuclear reactors dates back to the Windscale disaster of 1956, and again to the Ravenswood reactor in New York in 1963, long before the Seabrook occupation in 1977; his explorations of alternative technology, decentralization, and ecological technics go back to 1963, before the appearance of E.F. Schumacher's *Small is Beautiful*; and, finally, his analysis of the urban crisis was circulating in the mid-1950s, well before those of Saul Alinsky in the early 1960s.

With this long view as background, Bookchin presents in this collection a radical analysis and perspective. The broad dimensions of ecology are explored with massive strokes. The implications of this book are revolutionary.

"A revolution needs a prophet, the green revolution no less than others, and there is no shortage of aspirants. Now there are a few names on the lists: Petra Kelly, Rudolf Bahro — and Murray Bookchin... These essays are brilliant and exciting..."

Resurgence

"A provocative work that gives abundant evidence of its author's position at the centre of debate. It therefore deserves the careful attention of anyone seriously interested in constructive social thought. It is a work of crucial importance."

Telos

Murray Bookchin is a much sought after speaker, a teacher, and the author of many books and articles. His books include *Our Synthetic Environment*, *Post-Scarcity Anarchism*, *The Spanish Anarchists*, *The Ecology of Freedom*, and *The Limits of the City*.
